# 6

## strong reason that makes your working life more efficient

1

The stability is optimal thanks to the design of the bar. Also available with Tatec MX for special models.

2

The lubrication channel has been designed for a better application of modern lubricants.

3

The nose wheel has a strong construction and is adapted to all types of logging. The design makes the chain path becomes softer and reducing wear.

5

The interface between the nose and the body has a design which gives the nose good stability.

6

The roller bearing is designed to handle a high load.

4

Through developed material and heat treatment. We have achieved a guide bar that are more stable during work and have a longer life time.
